

I believe, a good start could be if I put here a collection of the referee reports and my replies. Of course, due to the referees' remarks and suggestions, the manuscripts were changed many times. Sometimes, therefore, the numbering of pages or equations, etc. can be confusing. I think however that the main ideas can be followed without such details. In any event, you can find all previous versions of the two papers at the following web site:

- <http://xxx.lanl.gov/abs/physics/0308035> (Does special relativity theory tell us anything new about space and time?)
- <http://xxx.lanl.gov/abs/physics/0308036> (On the meaning of Lorentz covariance)

L. E. Szabó
